OBJECTIVES
ADVANCEFUEL will address market barriers along the entire biofuel’s value chain, covering:
- Biomass availability
- Biofuels conversion and technology upscaling
- Sustainability performances
- End-user engagement and market development

ADVANCEFUEL will focus on fuels produced from renewable resources for road, marine and air transport.

Work Package 4 - Towards sustainable biomass production, harmonised sustainability standards and certification
Assess the sustainable production of biomass for advanced biofuels and test its performance against sustainability criteria, certification schemes and standards.
- Review of biomass sustainability certification schemes.
- Recommendations on criteria and options for harmonisation.
- Spatial explicit and quantitative insights regarding environmental impacts.
- Lifecycle GHG footprint and socio-economic performance.
